# Writing Linux Device Drivers in Assembly Language

## (Full Contents)

0 Preface and Introduction .....	3
0.1 Randy's Introduction .....	3
0.2 Why Assembly Language? .....	3
0.3 Assembly Language Isn't That Bad .....	4
1 An Introduction to Device Drivers .....	5
2 Building and Running Modules .....	7
2.1 The "Hello World" Driver Module .....	8
2.2 Compiling and Linking Drivers .....	13
2.3 Version Dependency .....	14
2.4 Kernel Modules vs. Applications .....	16
2.5 Kernel Stack Space and The Current Process .....	18
2.6 Compiling and Loading .....	19
2.6.1 A Make File for SKULL .....	19
2.7 Version Dependency and Installation Issues .....	20
2.8 Platform Dependency .....	20
2.9 The Kernel Symbol Table .....	21
2.10 Initialization and Shutdown .....	21
2.11 Error Handling in init_module .....	22
2.12 The Usage Count .....	23
2.13 Resource Allocation (I/O Ports and Memory) .....	24
2.14 Automatic and Manual Configuration .....	26
2.15 The SKULL Module .....	27
2.16 Kernel Versions and HLA Header Files .....	38
2.16.1 Converting C Header Files to HLA and Updating Header Files .....	39
2.16.2 Converting C Structs to HLA Records .....	41
2.16.3 C Calling Sequences and Wrapper Functions/Macros .....	43
2.16.4 Kernel Types vs. User Types .....	46
2.17 Some Simple Debug Tools .....	46
3 Character Drivers .....	51
3.1 The Design of scullc .....	51
3.2 Major and Minor Numbers .....	52
3.3 Dynamic Allocation of Major Numbers .....	53
3.4 Removing a Driver From the System .....	56
3.5 dev_t and kdev_t .....	56
3.6 File Operations .....	58
3.6.1 The llseek Function .....	65
3.6.2 The read Function .....	66
3.7 The write Function .....	66
3.8 The readdir Function .....	67
3.8.1 The poll Function .....	67
3.8.2 The _ioctl Function .....	67
3.8.3 The mmap Function .....	68
3.8.4 The open Function .....	68
3.8.5 The flush Function .....	68

3.8.6	The release Function .....	68
3.8.7	The fsync Function .....	68
3.8.8	The fasync Function .....	69
3.8.9	The lock Function .....	69
3.8.10	The readv and writev Functions .....	69
3.8.11	The owner Field .....	70
3.9	The file Record .....	70
3.9.1	file.f_mode : linux.mode_t .....	70
3.9.2	file.f_pos : linux.loff_t .....	70
3.9.3	file.f_flags : dword .....	70
3.9.4	file.f_op : linux.file_operations .....	71
3.9.5	file.private_data : dword .....	71
3.9.6	file.f_dentry : linux.dentry .....	71
3.10	Open and Release .....	71
3.10.1	The Open Procedure .....	71
3.10.2	The release Procedure .....	78
3.10.3	Kernel Memory Management (kmalloc and kfree) .....	78
3.10.4	The scull_device Data Type .....	79
3.10.5	A (Very) Brief Introduction to Race Conditions .....	80
3.10.6	The read and write Procedures .....	82
3.11	The scullc Driver .....	92
3.11.1	The scullc.hhf Header File .....	92
3.12	The scullc.hla Source File .....	94
3.13	Debugging Techniques .....	108
3.13.1	Code Reviews .....	108
3.13.2	Debugging By Printing .....	110
3.13.2.1	linux.printk .....	110
3.13.2.2	Turning Debug Messages On and Off .....	111
3.13.2.3	Debug Zones .....	112
3.13.3	Debugging by Querying .....	113
